

Trailer ABS Diagnostic Tool

The PLC TestCon (Tester/Converter) has functions to quickly test your trailer ABS system and get you back on the road, saving you time and money!

Tests the Trailer ABS & In-Cab Trailer ABS Fault Lamp without a PC. The PLC TestCon also allows you to run Trailer ABS PC-based diagnostic applications.

Trailer Tester - Plug and Play!

In the default mode of operation “Tractor Mode”, the PLC TestCon listens to the PLC data bus for Trailer ABS faults. If a fault exists, the “Trailer ABS Fault” LED illuminates. It can help you in determining whether a trailer is roadworthy.

In-Cab Trailer ABS Lamp Tester

When the PLC TestCon enters “Trailer Mode”, it sends Trailer ABS fault messages that toggle the in-cab Trailer ABS Fault lamp. It is an excellent choice for tractor, trailer, and trailer ABS end-of-line testing and validation.

Supported Trailer ABS Diagnostic Applications

The PLC TestCon used in conjunction with any RP1210-compliant J1708 VDA (such as the Dearborn Group DPA) can be used to run PLC-based diagnostics, such as:

- ✓ Meritor-WABCO
- ✓ Bendix
- ✓ Haldex
- ✓ Wabash National

With the PLC TestCon, the Dearborn DPA Family now supports more protocols, vehicles, **and trailers**, than any other commercially available adapter.
