

ABS Brake Diagnostic Tool

The PLC TestCon (Tester/Converter) has many functions to quickly test your braking system and get your vehicle back on the road, saving you time and money!

Our design lets you simply “plug it in” to test both the Trailer ABS & the In-Cab Trailer ABS Fault Lamp, without a PC. The PLC TestCon also allows you to run OEM-based diagnostics using a PC.

Trailer Tester - Plug and Play!

Plug in the PLC TestCon and immediately test for all standard and applicable fault codes associated with the trailer’s ABS braking system. If a fault exists, the LED lights up, helping you in determining whether a trailer is roadworthy.

In-Cab Trailer ABS Lamp Tester

Switch the PLC TestCon to "Trailer Mode", and our device sends messages to test the In-cab Trailer ABS Fault Lamp. You can use this for testing your tractor/trailer or your entire fleet... all without a PC. If you manufacture ABS equipped cabs or trailers, use our PLC TestCon for end-of-line testing & validation of production.

Supported Trailer ABS Diagnostic Applications

DG or your local representative can show you the PLC TestCon with our DPA 4 Plus, running OEM PLC-based diagnostics like:

- ✓ Meritor-WABCO
- ✓ Bendix
- ✓ Haldex
- ✓ Wabash National

With the PLC TestCon, the Dearborn DPA Family now supports more protocols, vehicles, **and trailers**, than any other commercially available adapter.
